POLIPAR		Test Report		FUSE CUT-OUT	
<b>General</b>					
Test category		Type test			
Type and name of the samples		Fuse cutouts			
Manufacturer		Erkan Elektromekanik A.Ş (Polipar Brand Owner)			
Address		1203. Street No: 38/L-5/D Ostim Organized Industrial Area, Ankara/Türkiye, Postcode: 06374			
Manufacturing date		2021-12			
Main technical parameters of the samples	Rated voltage (kV)		24		
	Rated current (A)		100		
	Rated frequency (Hz)		50		
	Rated current of the fuse-base (A)		300		
	Rated current of the equipped fuse-link (A)		6、 100		
	Rated breaking current (kA)		5		
	Power-frequency withstand voltage dry test (phase to earth) (kV)		50		
	Power-frequency withstand voltage dry test (distance) (kV)		60		
	Power-frequency withstand voltage wet test (phase to earth) (kV)		50		
	Power-frequency withstand voltage wet test (distance) (kV)		60		
	Lightning impulse withstand voltage dry test (phase to earth) (kV) Peak		125		
	Lightning impulse withstand voltage dry test (distance) (kV) Peak		145		
	Description		24kV Porcelain Fuse Cutout		
Test period: From June. 3, 2022 to June. 15, 2022					

POLIPAR		Test Report		FUSE CUT-OUT	
<b>Test conclusion</b>					
Manufacturer	Erkan Elektromekanik A.Ş (Polipar Brand Owner)				
Type of the samples	FUSE CUT-OUT				
Name of the samples	Fuse cutouts				
Manufacturer	Erkan Elektromekanik A.Ş (Polipar Brand Owner)				
Test items and results	Power-frequency voltage dry tests [phase to earth: 50kV 1min; fracture: 60kV 1min]				PASS
	Power-frequency voltage wet tests [phase to earth:50kV 1min]				PASS
	Lightning impulse voltage dry tests [phase to earth: 125kVPeak;fracture: 145kVPeak]				PASS
	Temperature-rise test[100A]				PASS
	Breaking tests1[24kV, 8kA, 6A and 100A 3 times each]				PASS
	Breaking tests2[24kV, 4.8~6.4kA, 6A and 100A 3 times each]				PASS
	Breaking tests3[24kV, 1.6~2.4kA, 6A and 100A 1 time each]				PASS
	Breaking tests4[24kV, 400~500A, 6A 2 times each]				PASS
	Breaking tests5[24kV, 16.2~19.8A, 6A 2 times each]				PASS
	Pre-arcing time-current characteristics test				PASS
	Operating time-current characteristics test				PASS
	Mechanical tests: Mechanical testing of fuse bases and fuse-carrying parts [500times"CO"]				PASS
	Thermal Cycle test				PASS
	Torque test				PASS
	Dimensional and Galvanising test				PASS
	Radio interference voltage (r.i.v.) tests				PASS
	Measurement of Resistance of fuse-links				PASS
Test standards	IEEEStdC 37.41 IEEE Standard Design Tests for High-Voltage(>1000V)Fuses and Accessories				
	IEEE Std C 37.42 IEEE Standard Specifications for High-Voltage(>1000V)Fuses and Accessories				
Test conclusion	The tests have been carried out from 6/3-6/15/2022. the test items meet the relevant clauses of above test standards and technical specifications, and the samples have passed the tests.

Test Report

FUSE CUT-OUT

**Diagram of measuring points of temperature-rise**

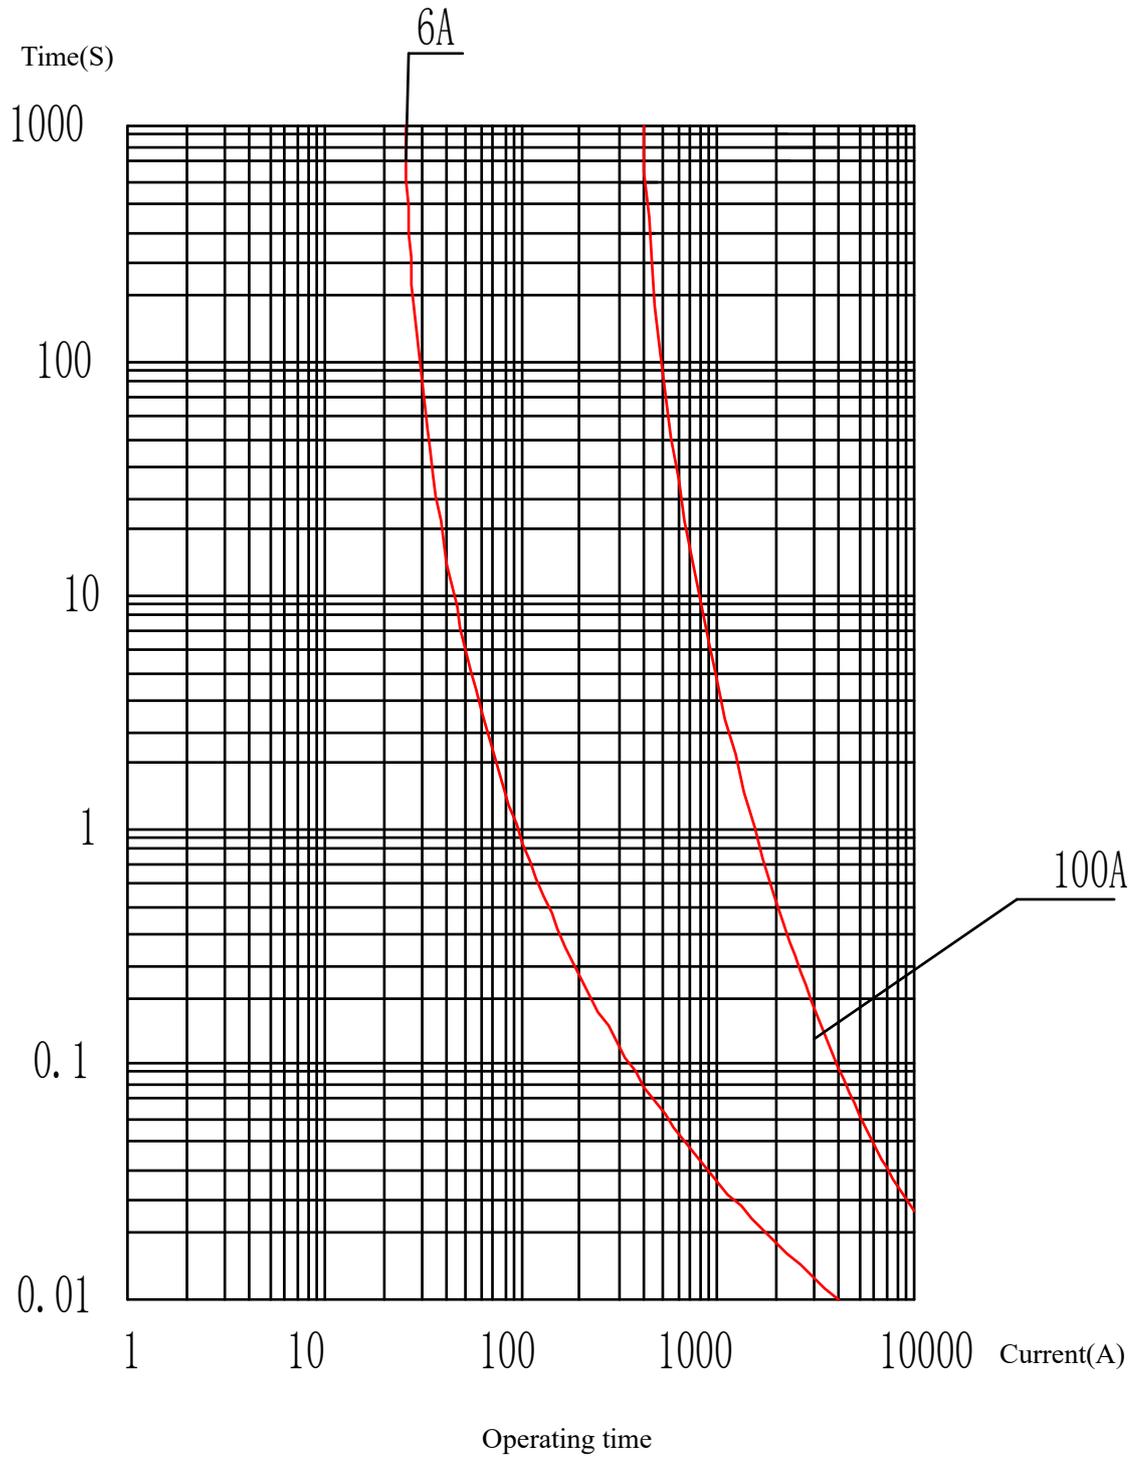

POLIPAR	Test Report	FUSE CUT-OUT
<b>Mechanical test</b>		
Test date: June. 06, 2022		
<p>1. Mechanical strength of fuse-base and fuse-carrier</p> <p>200 times of closing and 200 times of opening are made respectively on three fuses</p> <p>At the conclusion of the operations, the fuses shall be in an operable condition with no failure in the insulators and mechanical performance.</p>		
Test date: June 06, 2022		
<p>2. Mechanical strength of fuse-links</p> <p>a) Static test:</p> <p>The specified axial tensile forces of 60 N are applied on one fuse-link gradually, with no precipitous action. No any damage is observed on the fuse-link after 30min. (such as rupture, loosening, slipping of connections, or elongation of components)</p> <p>b) Dynamic test:</p> <p>The fuse-links are installed on the fuse according to normal service condition and 20 times of closing and 20 times of opening are made respectively.</p> <p>After the operations, no any damage is observed on the fuse by visual inspection. (such as rupture, elongation of components, loosening or slipping of connections)</p>		
<p>Note: The test Passed.</p>

POLIPAR	Test Report	YKFCO1-15
<b>Mechanical tests</b>		
Test date: June.12, 2022		
<p>1. Mechanical testing of fuse bases and fuse-carrying parts</p> <p style="padding-left: 40px;">The three fuses are closed and opened 500 times each.</p> <p style="padding-left: 40px;">At the end of the operation, the fuse was in an operable condition without any damage to the insulator or mechanical properties.</p>		
Test date: June. 12, 2022		
<p>2. Mechanical strength of fused parts</p> <p>a) Static tension test:</p> <p style="padding-left: 40px;">Apply 125%*60N axial tension to five fuses gradually, without sudden movement.</p> <p style="padding-left: 40px;">No damage to the fused parts (e.g. broken, loose, dislodged connections, or significantly elongated components) was detected.</p>		
<p>Note: The test passed</p>		

POLIPAR	Test Report	FUSE CUT-OUT
<b>Thermal cycle and torque tests</b>		
Test date: June.8, 2022		
<p>Test Procedure:</p> <p>Each cycle consists of the following:</p> <ol style="list-style-type: none"> <li>a. The fuse cutout samples were immersed in water for a minimum of 1h. Water temperature is from 5 to 35 °C. The depth of immersion provides a minimum water level of 13mm above any porcelain cavity, filled or open, or any hardware.</li> <li>b. The fuse cutout samples were removed from water. The temperature of the air surrounding the device is lowered from ambient room temperature to -40°C at a rate controlled to prevent thermal shock. A temperature of -40°C to -50°C was maintained for a minimum of 2h.</li> <li>c. The temperature of the air surrounding the fuse was raised from -40°C to 60°C at a rate controlled to prevent thermal shock. A temperature of 60°C to 70°C was maintained for a minimum of 2h. The device shall be permitted to return to room temperature before reimmersing it in water for subsequent test cycles.</li> </ol>		
Test date: June. 10, 2022		
<p>Acceptance of criteria:</p> <p>There shall be no cracks in the insulator or loose hardware after above tests.</p>		
<p>Note: The fuse cutout samples are in good condition after above tests. Test passed.</p>		

POLIPAR	Test Report	FUSE CUT-OUT
<b>Torque tests</b>		
Test date: June.8, 2022		
<p>Test Procedure:</p> <p>Torque tests were performed on fuses that utilize threaded fasteners to attach the hardware to the insulator. Five new fuse cutouts were tested.</p>		
Test date: June.8, 2022		
<p>Acceptance of criteria:</p> <p>A torque of 125% of the nominal values specified by manufacturer POLIPAR should be applied to the threaded fasteners that attach the hardware to the insulators. The specified value by POLIPAR is 20kN, so 25kN torque was tested. The condition of the device after testing must be no damage to the insulators, thread failures, or loose components.</p>		
<p>Note: The fuse cutout samples are in good condition after above tests. The test passed.</p>
